

LHH Residents with Substance Use Disorders: Diagnoses, Referrals and Services

11/9/21

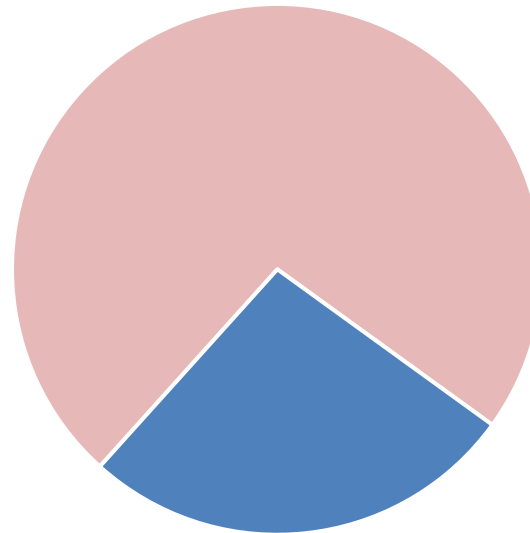

Behavioral Health Diagnostic Overview

Roughly 3/4 LHH residents are diagnosed with conditions impacting brain function and behaviors:

- Neurocognitive Disorder Diagnosis (NC)
- Mental Health Diagnosis (MH)
- Substance Use Disorder Diagnosis (SUD)

July 2021

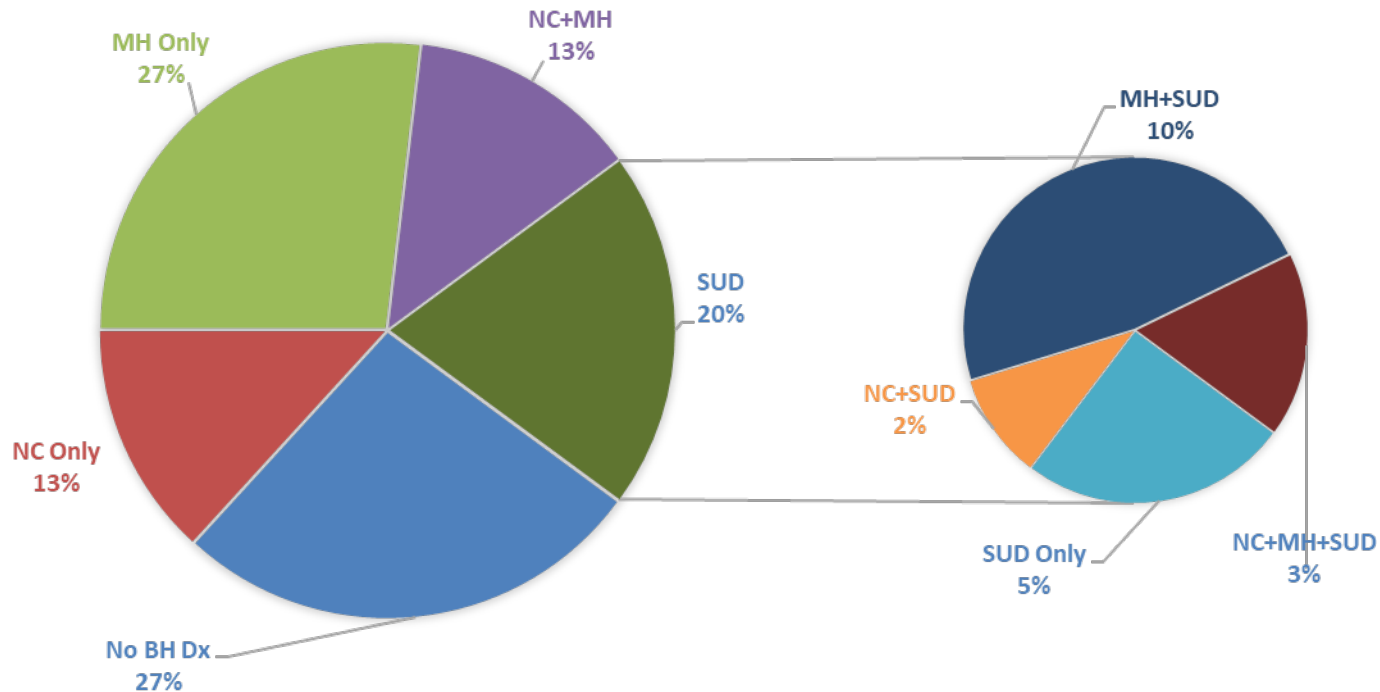

■ Rts. w/ BH Dx: 73.3% ■ No BH Dx: 26.7%

Substance Use Disorder (SUD) Diagnostic Overview

LHH RESIDENT BEHAVIORAL HEALTH DIAGNOSES

About 1/5 LHH residents have co-occurring SUDs

Most common behavioral health diagnoses for LHH residents

- MH only: 27%
- NC only: 13%
- NC+MH: 13%
- *MH+SUD: 10%
- SUD only: 5%
- *NC+MH+SUD: 3%
- *NC+SUD: 2%

(* co-occurring disorders makes engaging in specialty SUD treatment challenging)

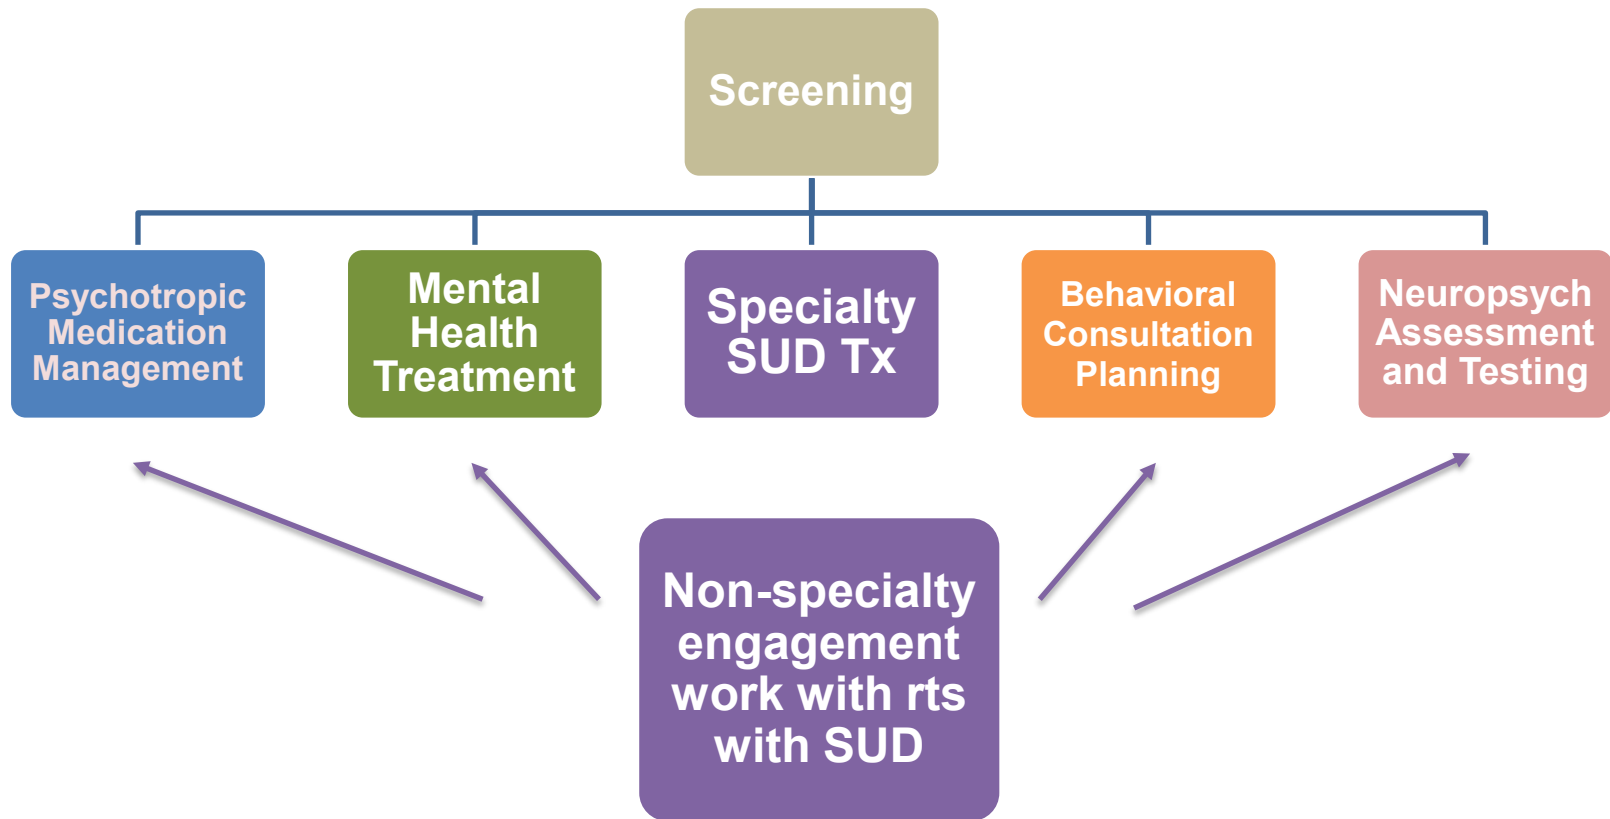

Referrals for LHH Residents with SUD

In July 2021: **143** LHH residents had SUD Dx in Epic Problem List

- 89% (127) have been referred to LHH Psychiatry
 - 82% (117) were referred before July 2021
 - 7% (10) were referred during July 2021
- 11% (16) were never referred to LHH Psychiatry (since 2017)

Next Steps

1. Working on comprehensive hospital-wide strategies for opioid overdose prevention

Key components:

- Education and training
- Enhance access to services
- Implement Harm Reduction approaches

2. Enhancing service offerings

3. Applied for Drug MediCal Certification for our specialty SUD treatment program

Thank you!
