Quick start

If you develop COVID-19 symptoms at any point, see your healthcare provider and get tested. See page 7.

Why did you get tested?

- I have symptoms of COVID-19. See page 5 for a list of COVID-19 symptoms.
- I am a “Close Contact” to someone with a positive COVID-19 test. See page 6 for the definition of “Close Contact.”
- I have NO symptoms, I was NOT a “Close Contact” with someone with COVID-19, AND I got tested for another reason.

What must you do while you’re waiting for your COVID-19 test result?

- Stay home and away from others while you wait for test results. You must assume you have COVID-19 until your test results return. See page 7.
- Stay home and away from others for 14 days since your exposure. See page 7.
- Take usual precautions to prevent the spread of COVID-19. See page 15.

What is your test result?

- Positive
- Negative}

- Positive
- Negative
- Positive
- Negative
What must you do after you get your COVID-19 test result?

**Positive**
Stay home and away from others until it has been at least 10 days since your symptoms started AND your symptoms have improved AND it has been at least 24 hours since your fever resolved. **See page 10** for details.

If you never had symptoms you must stay home and away from others for at least 10 days since the date your test was done. **If you have a positive test, a public health worker will call you. Learn more on page 11.**

**Negative**
It can be tricky because the test is not perfect! **See page 12. If you have questions, contact your healthcare provider.**

**Negative**
You still need to stay home and away from others for 14 days. Certain workers may not need to stay home. **See page 13.**

**Negative**
You do not need to isolate or quarantine. Take usual precautions to prevent the spread of COVID-19. **See page 15.**
Introduction

This booklet tells you what to do when you’re waiting for your COVID-19 virus test results. Check with your doctor’s or healthcare provider’s office first if you’d like to get tested; in San Francisco healthcare providers MUST test anyone who has a symptom of COVID-19 or is a “Close Contact” of someone with COVID-19. You can also get tested at a CityTestSF location. The booklet helps you answer these questions:

- Do I need to isolate or quarantine (i.e., stay home, do not go to work or school, stay away from others, etc.) after my test?
- How can I protect myself and others while waiting for my COVID-19 test results?
- What am I required to do if I find out I tested positive?
- What does a negative test result mean?
- What am I required to do if I am a “Close Contact” of someone who has COVID-19? See page 6 for the definition of “Close Contact.”
- When can I go back to work, ride the bus, go for a walk outside or go to the grocery store?
- What resources are available to me if I have to stay home and can’t work?

People may get a COVID-19 test for three main reasons:

1. You had one or more of the symptoms of COVID-19,
2. You are a “Close Contact” of someone who tested positive for COVID-19, or
3. You have NO symptoms of illness, you are NOT a “Close Contact” of someone who has COVID-19, AND you are getting tested for another reason (e.g., you are an essential worker, you are about to get a dental procedure or elective surgery, etc.)

If you have symptoms or are considered a “Close Contact” (#1 or #2 above), you must isolate or quarantine (i.e., stay home, do not go to work or school, stay away from others, etc.) while you are waiting for your test result. See page 7 (“What are the rules for isolating or quarantining?”). If you have recovered from COVID-19 in the last 3 months, talk to your healthcare provider about what to do next.
Symptoms of COVID-19
Any symptom below that is new or not explained by another reason

- Fever (100.4°F / 38.0°C or higher), chills, or repeated shaking/shivering
- Cough
- Sore throat
- Shortness of breath, difficulty breathing
- Feeling unusually weak or fatigued
- Loss of taste or smell
- Muscle pain
- Headache
- Runny or congested nose
- Nausea, vomiting, or diarrhea

If you have symptoms that are not on this list but are concerned you may have COVID-19, contact your healthcare provider.

If you have COVID-19 symptoms AND you have recovered from COVID-19 in the last 3 months, talk to your healthcare provider about what to do next.

If you do not fall into #1 or #2, you do not need to isolate or quarantine after getting tested; you can simply wait for your test results and continue usual precautions during this pandemic. See page 15 (“Prevent the spread”).

If your result is positive, see page 10 (“What if I get a positive COVID-19 test?”).

Once you get your results, the length of time that you have to continue to isolate or quarantine at home is different depending on your test result and why you were tested. This booklet helps you understand how long you need to isolate or quarantine to prevent the spread of COVID-19 and save lives.
You are considered a “Close Contact” if you had any of the following types of contact with someone with COVID-19 (regardless of whether you or the person with COVID-19 were masked) while they were contagious*:

- Lived or stayed overnight with someone with COVID-19
- Were physically intimate with someone with COVID-19, including only kissing or having sex
- Took care of or received care from someone with COVID-19
- Were within 6 feet of someone with COVID-19 for a total of 15 minutes or more during a 24-hour period
- Had direct contact with the bodily fluids or secretions of someone with COVID-19 (e.g., they coughed or sneezed on you or you shared eating or drinking utensils with them)

*Contagious Period: People with COVID-19 are considered contagious starting 48 hours before their symptoms began until 1) at least 10 days have passed since their symptoms began, 2) they haven’t had a fever for at least 24 hours AND 3) their symptoms have improved. If the person with COVID-19 never had symptoms, they are considered contagious starting 48 hours before their positive COVID-19 test was collected until 10 days after they were tested.
What are the rules for isolating or quarantining?

These rules apply if:

1. You had one or more symptoms of COVID-19 (If this is you, get tested! While you wait for results, these rules also apply to you)
2. Someone you had Close Contact with found out that they tested positive for COVID-19
3. You tested positive for COVID-19

Do not leave your home unless you are getting healthcare:
- Do not go to work, school or public areas
- Do not take public transportation, ride shares or taxis to the extent possible. If you must use shared transit, read more at www.sfcdcp.org/safertransit
- Do not prepare or serve food to others
- Do not allow visitors into your home unless you need their help to take care of yourself
- Limit your contact with pets

If you live with other people:
- Limit contact with others as much as possible
- You and others in your household should wear a face covering that covers your nose and mouth at all times at home (see Appendix A for examples of how to properly wear a face covering)
- Stay in one room away from others
- Wash your hands frequently
- Clean and disinfect surfaces that are touched often (such as counters, tabletops, doorknobs, light switches, faucets, toilets, phones, tv remotes, keys, keyboards)
Keep your own set of utensils, plates, towels, bedding, or other household items. Do not share them.

Use a separate bathroom, if possible. If you share a bathroom:
- Turn on fans that pull air out of the bathroom
- Open windows
- Wear a face covering
- Flush the toilet with the lid closed
- Wash your hands with soap and water for at least 20 seconds
- Wipe down anything you touched with a disinfectant

You can ask friends or loved ones to help:

If people ask if they can help, they can:
- Leave food and drinks at your door
- Get you medicine to relieve symptoms
- Help care for children, parents, other dependents, or your pets

If friends and family come to help, remind them to wear a face covering and wash their hands.

Persons unable to care for themselves don’t have to isolate from their caregiver. However, caregivers will need to quarantine for 14 days if your test results come back positive for COVID-19. See more on page 13 (“If I had Close Contact with someone with COVID-19, how long do I quarantine for?”).

If you cannot meet the requirements for Isolation or Quarantine where you currently live, call 311 to request help with housing, food, or other needs. See more on page 16 (“Resources”).

Take care of yourself:
- Rest and drink plenty of fluids.
- You may take an over the counter medicine like acetaminophen (Tylenol®) or ibuprofen (Motrin® or Advil®) to reduce fever and pain, as long as those medicines are safe for you to take. For children 2 or under, check with your healthcare provider first.
- Note that medicines do not “cure” COVID-19 and do not stop you from spreading the virus.
Seek medical care if your symptoms get worse:

Symptoms that indicate you should seek medical care include:

- Difficulty breathing
- Can’t keep fluids down
- Dehydration
- Confusion
- and other serious symptoms.

If possible, call ahead before going to your healthcare provider’s office or hospital and tell them whether:

- You are having symptoms of COVID-19 and waiting for your test results, OR
- You had Close Contact with someone with COVID-19, OR
- You tested positive for COVID-19.

If you call 911, let them know your situation as well.

This allows health care personnel to prepare for your arrival and protect others from getting infected.

- Do not wait in any waiting room. Wear a face covering or mask at all times if possible.
- Avoid using public transportation to the extent possible. If you must use shared transit, read more at www.sfcdcp.org/safertransit
What if I get a positive COVID-19 test?

If you get a positive test result, you must isolate at home while you are contagious. See page 7 (“What are the rules for isolating or quarantining?”). It is a San Francisco directive that you must isolate while you are contagious (see Directive of the Health Officer No. 2020-03b at www.sfdph.org/directives). Note: if you have recovered from COVID-19 in the last 3 months, talk to your healthcare provider about what to do next.

You are considered contagious until all of the following are true:

- It has been at least 10 days since your symptoms started*;
- AND
- Your fever is gone for at least 24 hours, without the use of fever-reducing medicines (e.g., acetaminophen/Tylenol, ibuprofen/Motrin, etc.); AND
- Your symptoms have gotten better

Your healthcare provider might ask that you isolate at home longer than 10 days, depending on your health history. Healthcare workers, especially Skilled Nursing Facility workers, may have different rules. See www.sfcdcp.org/rtw.

If you test positive but never had any symptoms, you are still contagious and must isolate at home until 10 days have passed since the date of your positive test.

Tell your “Close Contacts” that you tested positive

Try to remember who you had Close Contact with during the 48 hours before you first noticed symptoms until you isolated (i.e., until you stopped being around other people). If you

* One of the COVID-19 symptoms that may not improve quickly is loss of taste or smell. You can stop isolating at home even if your sense of taste or smell has not improved as long as it has been 10 days since your symptoms started, your other symptoms have improved, and you have had no fever for at least 24 hours without the use of fever-reducing medicines.
never had symptoms, think of all the people you had Close Contact with in the 48 hours before you had your positive test until you isolated. They must stay home and quarantine for 14 days after they last had Close Contact with you. They can reference page 13 (“If I had Close Contact with someone with COVID-19, how long do I quarantine for?”).

A “Close Contact” is anyone who had any of the following types of contact with you (regardless of whether either of you were masked) while you were contagious*:

- Lived or stayed overnight with you
- Was physically intimate with you, including only kissing or having sex
- Took care of you or you took care of them
- Was within 6 feet of you for a total of 15 minutes or more during a 24-hour period
- Had direct contact with your bodily fluids or secretions (e.g., you coughed or sneezed on them or you shared eating or drinking utensils with them)

*Contagious Period: People with COVID-19 are considered contagious starting 48 hours before their symptoms began until 1) at least 10 days have passed since their symptoms began, 2) they haven’t had a fever for at least 24 hours AND 3) their symptoms have improved. If the person with COVID-19 never had symptoms, they are considered contagious starting 48 hours before their positive COVID-19 test was collected until 10 days after they were tested.

A public health worker will call you

A trained public health worker from the Department of Public Health (DPH) will reach out to you by phone or text from the number (628) 217-6101 or (628) 217-6102. They will check to see how you are doing, make sure you have what you need to isolate at home, and help you identify your “Close Contacts” to prevent the spread of the virus.

DPH does this whenever there is an outbreak of infectious diseases like measles, tuberculosis, and others to protect the community’s health.

These trained professionals will keep your personal information private and will never ask for your social security number, financial information, or your immigration status.

For more information, see: covid19.ca.gov/contact-tracing/
What if I get a negative COVID-19 test?

Read this page carefully and call your healthcare provider if you’re not sure what to do.

A “negative” viral test means you probably do not have COVID-19 infection right now. This is a little tricky, so read carefully:

- If you never had any symptoms
  - and were not a “Close Contact” of someone with COVID-19, then you do not need to isolate or quarantine.
  - and were a “Close Contact” of someone who had COVID-19, you still must quarantine and stay home until a total of 14 days have passed since you were in Close Contact with that person.

- If you had symptoms, you may be able to end isolation and resume your usual life once your symptoms are better and you have not had a fever for 24 hours. However, there is still a chance you may actually have COVID-19 and could spread the virus despite a negative test result because the COVID-19 virus test is not 100% perfect. Your options are:
  1. **Ask your healthcare provider** to help you decide if you should continue to stay away from others (preferred option), OR
  2. Resume your usual life once your symptoms are better and you have not had fever for 24 hours, OR
  3. Continue to isolate and stay home until it has been at least 10 days since your symptoms started especially if you are concerned about being around people who might get really sick if they got COVID-19 (see www.sfcdcp.org/vulnerable)
If I had Close Contact with someone with COVID-19, how long do I quarantine for?

“Close Contact” has a specific meaning! See the box on page 6.

After having Close Contact with someone who tested positive for COVID-19, you must self-quarantine at home for 14 days. It can take up to 14 days to develop COVID-19 and you may infect others during this time. See page 7 (“What are the rules for isolating or quarantining?”). It is a San Francisco directive that you must quarantine at home after Close Contact (see Directive of the Health Officer No. 2020-02b at www.sfdph.org/directives).

Which groups do NOT have to quarantine?

“Essential COVID-19 Response Workers” are healthcare workers, laboratory personnel handling COVID-19 specimens, morgue workers, first responders, law enforcement, sanitation workers, 911 and 311 operators, emergency management personnel, individuals assigned to work as Disaster Service Workers, and individuals who work in long-term care facilities or homeless shelters.

If you are an “Essential COVID-19 Response Worker,” you may be able to continue working immediately after “Close Contact” with a person who tested positive for COVID-19 as long as you are not sick and comply with requirements to wear a mask and any other policies specific to your employer. Try to follow the instructions on page 7 (“What are the rules for isolating or quarantining?”) while not at work.
If you had Close Contact and you do not develop any symptoms, you can end quarantine 14 days after your last Close Contact with the person with COVID-19.

- If you cannot avoid having Close Contact with the person with COVID-19 while they are sick (for example, you are their caregiver), you must stay in quarantine for 14 full days after the day that person completed their self-isolation. (This is likely to be at least 24 total days of home quarantine since your “Close Contact” first had symptoms).

and you develop symptoms, get tested and follow the instructions on page 7 (“What are the rules for isolating or quarantining?”).

- If you get a positive COVID-19 virus test: follow the instructions on page 10 (“What if I get a positive COVID-19 test?”).

- If you get a negative COVID-19 virus test, discuss this with your healthcare provider. They might still diagnose you with COVID-19 and ask that you follow the instructions on page 10 (“What if I get a positive COVID-19 test?”). If they tell you they don’t think you have COVID-19, you still must stay home and quarantine for 14 days after your last Close Contact with the confirmed COVID-19 case.
Prevent the spread

By getting your COVID-19 test, you have taken an important step to care for yourself, your loved ones, and our community. No matter the results of your test, remember that you can do many things to prevent the spread in the days, weeks, and months ahead:

- Wear a face covering that covers your mouth and nose whenever you are out of the house.
- Avoid getting together with people not in your household.
- Stay six feet away from people outside your household.
- If you must get together with people not in your household, avoid being indoors. Outdoor interactions are much safer. However, you should still stay 6 feet away and wear a face covering during outdoor interactions.
- Regularly wash your hands with soap and water for at least 20 seconds.
- Keep your social circles small and stable.
- If you don’t have soap or water, you can use hand sanitizer that contains at least 60% alcohol. Rub the hand sanitizer on all surfaces of your hands until your hands feel dry.
Resources

Food help

Call 311 anytime, especially if you’re having trouble getting or affording food while isolating or quarantining. Visit SF.gov/get-food-resources for more information.

Sign up for monthly CalFresh benefits at (415) 558-4700 or GetCalFresh.org

For older adults and people with disabilities

Call the Department of Aging and Adult Services (DAAS) at 415-355-6700 to get:

- Free restaurant meals through Great Plates Delivered SF
- Home-delivered meals
- Emergency food boxes
- Support with online food delivery services
- Grocery drop-off from volunteers

Housing information

Evictions

You cannot be evicted during the pandemic. You can get more time to pay your rent. However, your rent is not cancelled. You still owe your landlord any missed rent payments.

If you need help paying rent, utilities, or other housing costs, you can apply for Give2SF funds at give2sfhousing.org. You need to earn under a certain amount for your household size.

Rent increases

Rent increases to rent controlled units and City regulated units are on hold temporarily.

See more information on SF.gov/eviction-moratorium
Tenant Counseling Organizations

24 hours a day, 7 days a week
Financial and work-related help

If you have to isolate or quarantine, you can use Paid Sick Leave or State of California unemployment benefits. Apply for unemployment at edd.ca.gov

During the pandemic, you do not need to have a letter from your healthcare provider to use Paid Sick Leave.

If you don’t have sick pay and you test positive for COVID-19, San Francisco can help replace your income up to $1,285, while you stay home, from the Right to Recover Fund. This program will serve up to 1,500 San Franciscans who test positive for COVID-19 to focus on their health and recovery regardless of their immigration status. For more information, visit oewd.org/employees-impacted-covid-19

If you have other concerns related to the impact of isolation and quarantine on your work or finances, visit www.sfcdcp.org/workerFAQ

According to CDC and SF Department of Public Health recommendations, your employer should NOT request a doctor’s letter or a negative test to return to work if you had COVID-19. If they request either of these, you can direct them to the Department of Public Health’s letter to employers at www.sfcdcp.org/workletter. This letter is also printed on the next page.
Dear San Francisco Employers*:

Thank you for all that you are doing in these unprecedented times to ensure your employees are well and not at risk of spreading COVID-19 to others at the workplace. We truly appreciate all your efforts to modify your businesses and everyday lives to reduce the risk of spreading COVID-19 and to save lives.

In an effort to support workplace safety and economic recovery we want to remind you that according to the Centers for Disease Control and Prevention (CDC), employees who had COVID-19 are considered no longer contagious and may therefore return to work if:

- it has been 10 days since their symptoms started AND
- their symptoms have improved AND
- it has been at least 24 hours since they have had a fever without the use of fever-reducing medication

If the employee never had symptoms and tested positive for the COVID-19 virus, they are considered no longer contagious and can return to work 10 days after their positive test.

Both the CDC and the San Francisco Department of Public Health (SFDPH) confirm that:

Employers should not request a medical note for clearance to return to work or a negative COVID-19 test result from employees who were diagnosed with COVID-19 before allowing employees to return to work.

Requesting employees provide a medical note or proof of negative COVID-19 virus tests after they have been diagnosed creates a backlog on the healthcare system, is unnecessary, delays return to work, and causes strain on testing availability for others who need to be tested. Employees are considered no longer contagious and may return to work when they meet the criteria described above.

Your employee who had COVID-19 may print this letter out to serve the purpose of:

1) showing proof that they can return to work as long as they meet the criteria above (detailed further at www.sfcdcp.org/rtw), and/or
2) showing proof that employers should not request proof of a negative COVID-19 virus tests to be allowed to return to work. This letter can be found online at www.sfcdcp.org/workletter

Please refer to the following resources for more details.

- Ending Isolation or Returning to Work for Those Who Have Confirmed or Suspected COVID-19: www.sfcdcp.org/rtw
- What to Do if Someone in the Workplace Has COVID-19: www.sfcdcp.org/covid19-positiveworkplace
- General San Francisco-specific information for employers: www.sfcdcp.org/businesses

Thank you for all that you do to keep our community healthy,

Tomás J. Aragón, MD, DrPH
Health Officer of the City and County of San Francisco

*not applicable to skilled nursing facilities
Returning to Work for Those Who Have Had COVID-19

If your employee had symptoms from COVID-19, they may return to work if they respond “Yes” to all three questions below:

1. Has it been more than 10 days since your symptoms started?
   - Yes, it has been more than 10 days since my symptoms started.
     Date symptoms started:_________________
   - No, it has not been more than 10 days since my symptoms started

2. Have your symptoms improved?
   - Yes my symptoms have improved
   - No my symptoms have not improved

3. Has it been more than 24 hours since your last fever of 100.4F (38C) or more without the use of fever-reducing medications?
   - Yes, it has been more than 24hrs since I had a fever without fever-reducing medications
   - No, it has not been more than 24hrs since I had a fever

If your employee never had any symptoms at all from COVID-19, they may return to work if they respond “Yes” to the following question:

1. Has it been more than ten days, since you had a COVID-19 positive test result?
   - Yes, it has been more than ten days, since I tested positive for the COVID-19 virus.
     Date of positive test:_________________
   - No, it has not been more than ten days, since I tested positive for the COVID-19 virus
