June 21, 2021

The Honorable London N. Breed, Mayor
City and County of San Francisco

The Honorable Shamann Walton, President
Board of Supervisors

Grant Colfax, M.D., Director
Department of Public Health

Subject: Report on Accidental Overdose Deaths

Dear Mayor Breed, President Walton, and Director Colfax:

The enclosed report includes preliminary data of accidental overdose deaths in the City and County of San Francisco from the recent four months of February 1, 2021, to May 31, 2021. This report satisfies the ordinance’s reporting criteria. For your reference, reports of preliminary data of accidental overdose deaths from January 1, 2020, to May 21, 2021, are enclosed.

The reports are published by the Office of the Chief Medical Examiner (OCME), Forensic Laboratory Division, to comply with local and state reporting guidelines and further OCME’s mission to provide neutral data to inform policymakers. Please note, these results are preliminary as of testing to June 18, 2021, and are subject to change as the OCME finalizes the manner and cause of each death. These reports are not intended to replace other death statistics within the City that rely on finalized death certificates.

Pertinent for accurate use of these reports is understanding the source of the data and its subsequent summarization process. Decedent demographic and case information were obtained from the OCME case management system. Additionally, specific details from investigator narratives, forensic toxicology results, and where available, preliminary autopsy findings, were utilized. Collected demographic information included race, gender, age, fixed address status, and locations of residence and death.

Due to their significance in accidental overdose deaths, the reported drugs were specific to fentanyl, heroin, medicinal opioids, methamphetamine and cocaine. Their detection in blood was captured to best determine relevance in each case. Medicinal opioid-positive cases required the presence of codeine, hydrocodone, oxycodone, morphine, hydromorphone, oxymorphone, buprenorphine, tramadol, and/or methadone. Heroin determination was more closely evaluated, requiring the presence of specific heroin markers in blood or urine, expected morphine to codeine ratios, and/or case details consistent with heroin use.

Sincerely,

Luke N. Rodda, Ph.D.
Chief Forensic Toxicologist and Director, Forensic Laboratory Division

cc: Office of the City Administrator

Accidental Overdoses by Day of Death

Accidental Overdoses Open cases do not have a final cause and manner of death classification; Acc. Overdoses Closed cases have a final cause and manner of death classification.

"No fixed address" denotes community members who may be experiencing homelessness.

"Residence" denotes address where decedent lived; "Location of Death" denotes the location where death was declared. For "Residence" and "Location of Death", the 4 most affected neighborhoods are represented, the "Others" category refers to all other zip codes within the City and County of San Francisco and any of out county residences.

"Gender" refers to gender at time of death.

"Total Deaths" denotes Accidental Overdoses where one or more drugs contribute to the cause of death; however, every point for each drug series is inclusive, but not necessarily exclusive, of that drug. "Total deaths" represents all accidental overdoses including ones for drugs not specified above.
