

2.06 CHEST PAIN / ACUTE CORONARY SYNDROME

EMSAC April 2024

Strive for total on-scene time of less than or equal to 15 minutes.
BLS Treatment
<ul style="list-style-type: none">● Assess circulation, airway, breathing, and responsiveness.● Bilateral blood pressures.● Oxygen as indicated.● Position of comfort.● Aspirin● NPO, unless otherwise noted.● Either list patient medications on PCR or gather medication vials for transport to hospital.
ALS Treatment
<p>Establish a large bore (18G or larger) IV with Normal Saline TKO. If possible, establish a second large bore NS lock in the same arm.</p> <p>12-lead EKG:</p> <ul style="list-style-type: none">⊖ Do prior to administration of Nitroglycerin or pain medication.○ Transmit if EKG interpretation is “STEMI” and notify appropriate STAR center.○ Apply “stand-by” defibrillation pads to all EKG confirmed STEMI patients. <p>Nitroglycerin: DO NOT administer Nitroglycerin to patients who have taken a phosphodiesterase inhibitor (erectile dysfunction drugs) within the following time frames:</p> <ul style="list-style-type: none">○ Sildenafil (Viagra, Revatio) or Vardenafil (Levitra, Staxin) < 24 hours○ Tadalafil (Cialis, Adcirca) < 48 hours○ See “Use 12-Lead EKG to Determine Safety of Nitroglycerin Administration” <p>Persistent chest pain of suspected cardiac origin at any level (scale 1 – 10) shall may be treated with Morphine or Fentanyl. Doses may be started at lower levels than for traumatic or other types of pain treatment.</p> <p>Ondansetron as needed for nausea.</p> <p>If hemodynamically unstable, go to Protocol 2.16 Shock.</p>

2.06 CHEST PAIN / ACUTE CORONARY SYNDROME

EMSAC April 2024

USE 12-LEAD EKG TO DETERMINE SAFETY OF NTG ADMINISTRATION

- Follow **Protocol 7.10 12-Lead EKG**.
- Determine presence of ST elevation in leads II, III and AVF. If ST elevation is present, then apply V4R lead.
 - If ST elevation present in V4R, do NOT give **NTG** (to maintain RV filling pressure).
 - If ST elevation in V4R AND clinical signs of shock, including SBP < 90 Hg go to **Protocol 2.16 Shock**.

Documentation

- "At Patient Side" Time.
- VS including bilateral BPs and room air O2 saturation.
- Reassessment of patient symptoms, complaints and vital signs." At minimum, two sets of vital signs and a reassessment should be done and documented in the PCR after any intervention.
- "O-P-Q-R-S-T symptom assessment:
 - **O** = Onset (Sudden or gradual)
 - **P** = Provoke (What were you doing when the pain started? Does anything make it better or worse?)
 - **Q** = Quality (What does the pain feel like?)
 - **R** = Region/Radiate (Where is the pain? Does it go anywhere else?)
 - **S** = Severity (On a scale of 1-10, 10 being the worst pain you have ever had, how would you rate that pain now? How would you rate that pain at its worst or during exertion/movement?)
 - **T** = Time (When or what time did this start?)
- Aspirin given by EMS. Note if patient self-administered Aspirin or if it was given by someone else (e.g. medical provider).
- EKG findings.
- List patient identifiers on **ALL** transmitted EKGs:
 - Patient Last Name + First Initial
 - Gender
 - Age
 - Ambulance company name and unit number
 - Provider agency and unit number
