3. Moccasin Engineering and Records Building: Phase 1 Review

(10:28)

The project team gave background and context on the design. The team sited the location of the campus within the larger Moccasin campus and within the San Francisco water distribution flow path. The team reviewed

the vehicular access and pedestrian access for the new proposed site plan. The team shared the details of the building organization, featuring open offices, two-story lobby, kitchen, and service areas, as well as various elevations and views of the building.

The landscape architect shared the goal of the design, which is to integrate the building into the existing campus and then relate the project back to the larger site context. The team shared the accessibility routes, landscape, tree and understory palette, and materials.

Commissioners asked whether the team had considered opening up the space between the two buildings, creating more of a connection to the administration building and creating more southern exposure. The team answered that they had not considered this and that the project site is narrow.

Commissioners had questions about the design of the colonnade and in relation to the Old Powerhouse, as well as the design of the façade and cornice.

Commissioners commented on design of the main stairway.

Commissioners commented on the placement and structure of the generator.
